

Google Cloud Assessment

CloudPhysics, a vendor agnostic platform you can leverage to run infrastructure assessments will help you gain visibility of your environment in minutes!

Goals of the assessment:

1. **Understand the infrastructure costs** of your existing on-premises (Private Cloud) or AWS
2. **Identify datacenter optimization opportunities** in your infrastructure
3. **Estimate costs of dynamic applications and clusters** for any instance in any GCP location with no commitment to migrating
4. **Compare side-by-side cost and compatibility** between GCP and On-Prem/AWS

Save up to 50% in costs when you migrate by "right-sizing" your VMs to optimally fit resource needs

Save 80% of time in assessing your hybrid cloud readiness, going from weeks to minutes

Understand your existing infrastructure cost (TCO)

Optimize your environment

Discover if Google Cloud is right for you

Fifteen minutes is all it takes!

Requirements

VMware vCenter Server 4.1, 5.0, 5.1, 5.5, 6.0, 6.5, 6.7 or AWS IAM Console access

What you give

15 minutes to activate your assessment

What you get

Potential cost savings from a detailed implementation analysis with adjustable configurations

Be empowered to make infrastructure decisions with insights in minutes!
